No part of the General Mills site as defined by MPCA is in that outline, and they are the lead agency for General Mills so would know best.

I'm sure about the big square box part – groundwater or vapor issues found there would not be related to General Mills. It's less clear about the little part that sticks down directly adjacent to the General Mills site outline on the map, if there is an issue found there, seems to me there could be intermingling of sources at the edge.

Subject: General Mills Boundary Question

Leah –

MPCA has submitted an initial assessment for a groundwater/vapor intrusion site adjacent to General Mills site.

Would you look at the attached map and let me know if General Mills site definition covers any portion outlined as SE Hennepin Groundwater and Vapor site?

Please let me know if you have any questions.
